

# IEA Brasil Gas Workshop 2019

## Natural Gas Market Reforms & Regulations Ballancing Regime and Hub Pricing

Superintendence of Infraestructure and Transportation - SIM

November 22<sup>th</sup>, 2019

**anp**  
Agência Nacional  
do Petróleo,  
Gás Natural e Biocombustíveis

## Balancing regime and hub price development

### *Regime de Balanceamento e formação de preço em hubs*

---

**MODERATOR** Hélio Bisaggio, Manager of Infrastructure & Transportation, ANP

#### SPEAKERS

**María Junco Madero**

Analysis and development manager  
ENAGAS (Spain)

**Gareth Davies**

Head of Industry Frameworks  
& Code Governance Manager,  
National Grid (UK)

**Justin Goonesinghe**

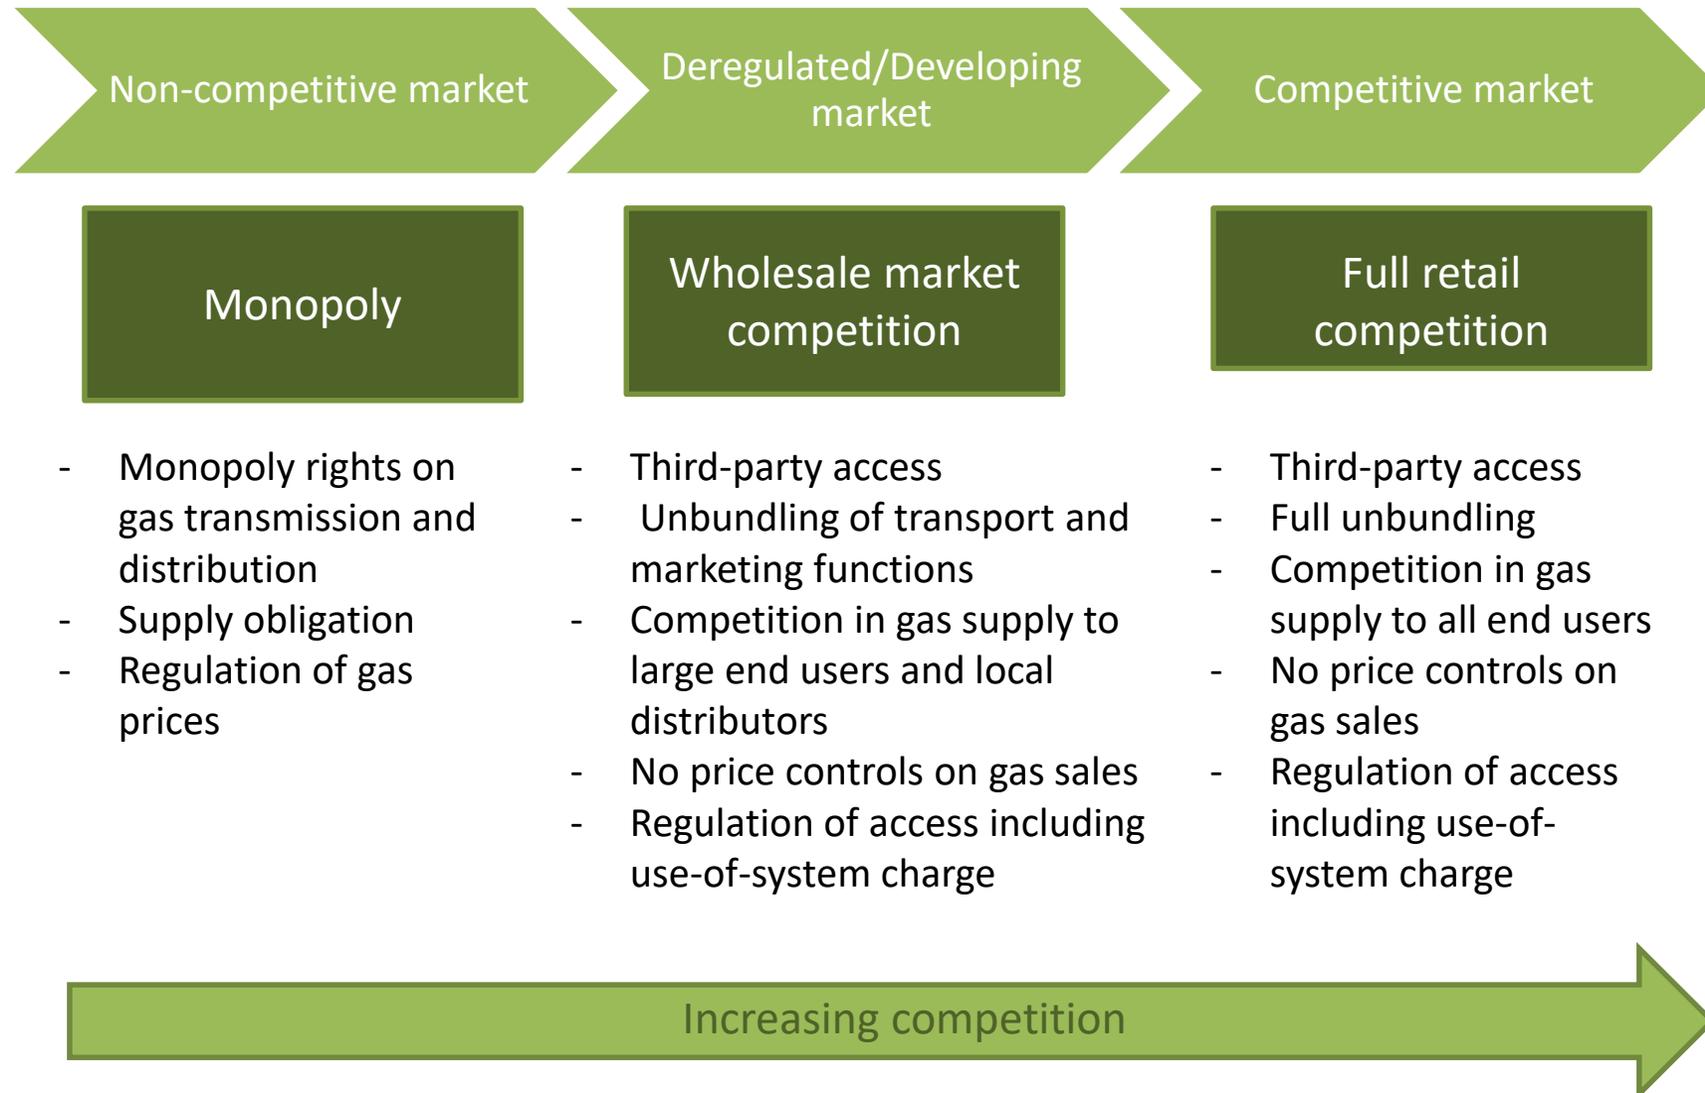

Head of EU Exit - Gas,  
Department of Business, Energy  
& Industrial Strategy (UK)

**Robson Coelho**

Head of Regulatory Affairs  
TBG

- New Gas Market setting a “Market Design”, aiming a liquid, diversified and competitive natural gas market
- The transition is already being implemented with the open-season for Bolívia-Brasil Pipeline capacity offering (entry and exit regime)

## Requires a New Market Design

- Separation of transport from competitive activities
  - Unbundling in transport (OU, ISO, ITO)
  - Entry and Exit capacity booking
  - Transportation tariffs approved by ANP
  - Coordination of transporters on Transportation System
  - Network Codes
  - Transparency of the offering and contracting of services
- 
- Gas Release Programs
    - Capacity Release

*Market Design  
(depends on  
new legislation  
and  
regulations)*

*Energy/Competition  
Policy*

## ➤ Market Area

Delimitation of the transport system where access to the Transportation Capacity at Entry and Exit Points occurs independently, with the free flow of gas

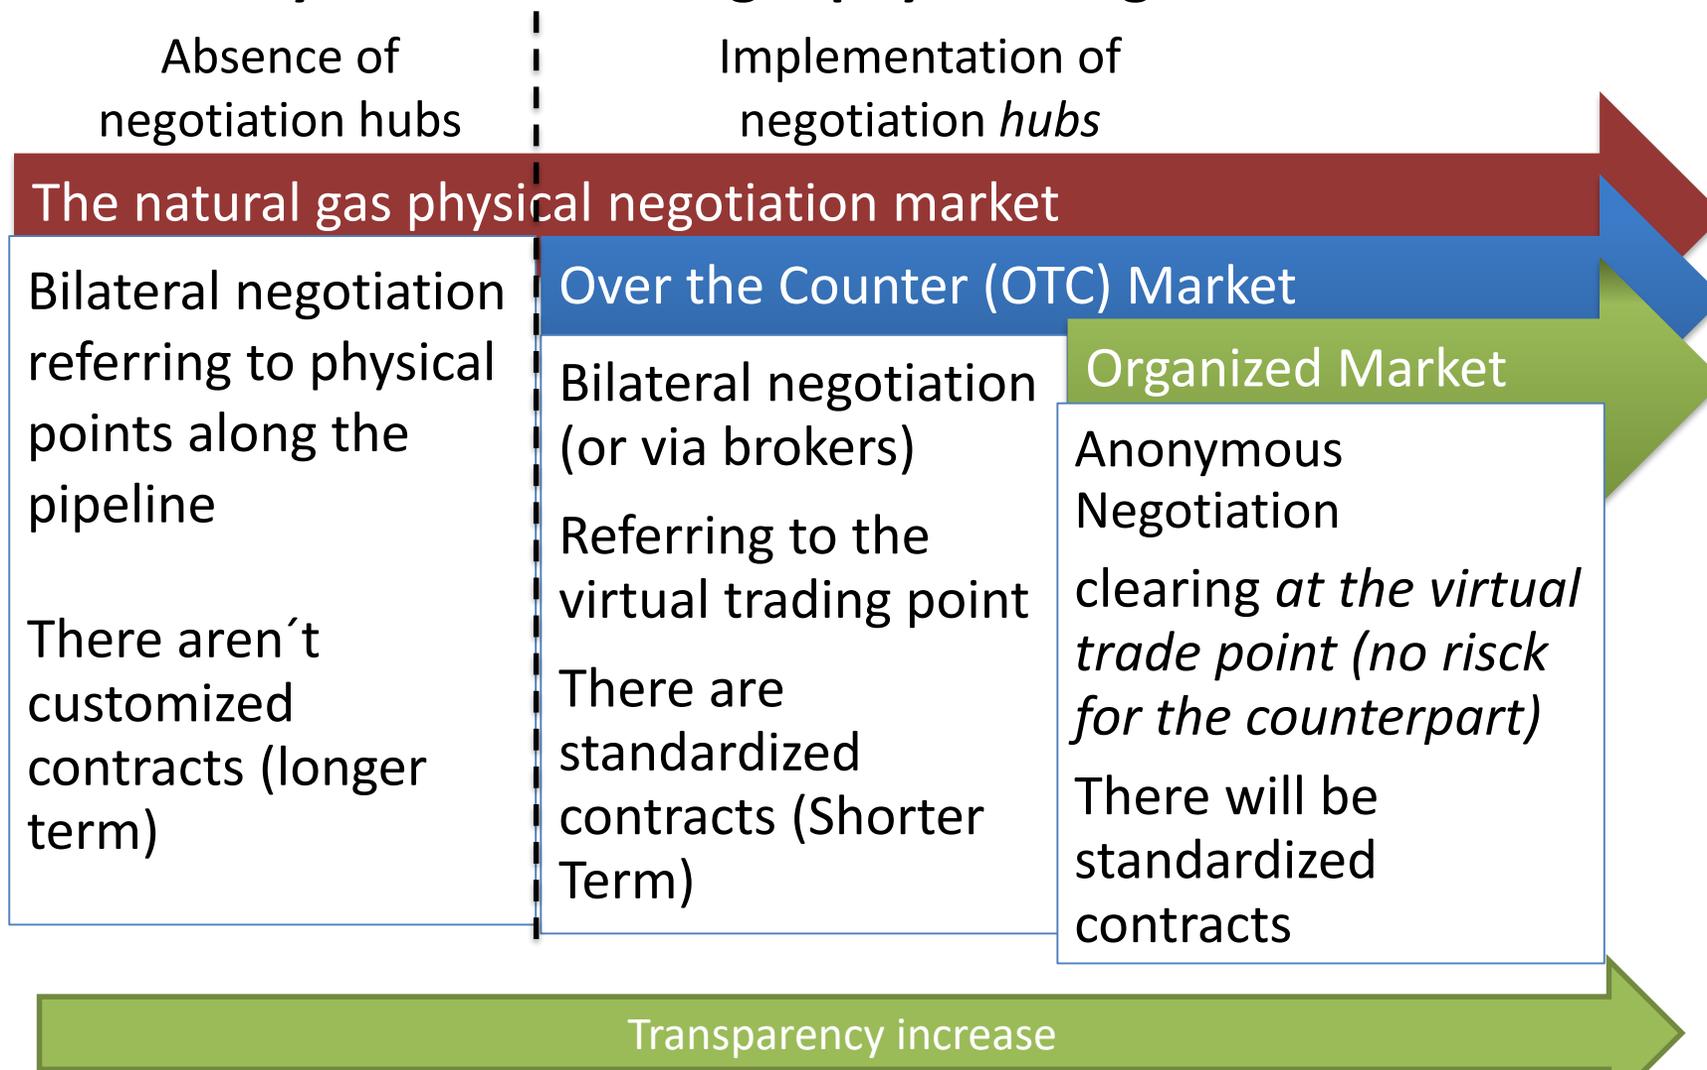

## ➤ Virtual Trading Point / Market Hub

Reference to the market where buyers and sellers meet for gas exchanges, resulting in a market price

Market areas enables the formation of virtual trading points

**The usage of standardized buying and selling contracts is not mandatory for the natural gas physical negotiation market.**

# Main drivers and obstacles to the development of the gas market

Lack of competitive forces → More suppliers and free consumers are needed

Lack of a comprehensive legislation → New draft bill sets “market design”

Lack of market driven gas price mechanisms → Trade hubs and exchanges

Lack of third party access → Contractual congestion management  
Essential Facilities Doctrine  
Shorter term transportation contracts

Lack of transportation infrastructure → authorization of new pipelines  
Ten year network develop. plan

**Thank you!**
